SUMMARY

Frontend and Shopify developer, Computer Science graduate (July 2026), with 9 months of hands-on e-commerce experience at Fantech World and Teevolution. Built 30 custom Shopify Liquid sections with hand-written CSS to match design requirements. Working knowledge of JavaScript, Next.js, Tailwind CSS, and Git, with independent projects including an AI-assisted LMS (RAG) and a map-based web app. Multilingual: Indonesian, English, Mandarin (HSK 4). Seeking a Frontend or Shopify developer role; open to relocation.

SKILLS

Frontend: HTML5, CSS3, JavaScript, Next.js, Tailwind CSS, Bootstrap, Responsive Design

Shopify / E-commerce: Shopify, Shopify Liquid, Theme Customization, Product Listings, Order Fulfillment

Backend / Tools: Next.js, Python, PHP, MySQL, Git, GitHub, RAG / LLM Integration, AI-assisted Development

Other: Customer Support (Email), SOP Compliance, Team Collaboration

EXPERIENCE

Web Commerce Intern (Shopify) — *Fantech World* Jul 2025 – Mar 2026

- Built 20 custom Shopify Liquid sections, delivering 1 complex or up to 3 simple sections per day
- Edited and extended the website theme by writing and modifying Liquid template code
- Wrote custom CSS to match design specs, including mobile-responsive banner layouts
- Added and edited product listings on the live Shopify storefront

Customer Service & E-commerce Intern — *Teevolution (part of Fantech World)* Jul 2025 – Mar 2026

- Answered about 30 customer emails per day under the company SOP, checking the inbox twice daily to keep every reply within the 3-business-day standard
- Helped build 10 custom Shopify sections from the Teevolution team's designs (popup, testimonial, FAQ, store locator, Judge.me reviews, order tracking)
- Managed order export and fulfillment for the online store

PROJECTS

AI-Integrated LMS (Thesis Project) — *github.com/DavisYJue/cloud-lms* Next.js, Python, DeepSeek, RAG

- Designed and built an AI-assisted learning management system (LMS) for students and teachers as a thesis project
- Implemented a Retrieval-Augmented Generation (RAG) pipeline with a locally hosted DeepSeek model grounded in course materials
- Built the full-stack app in Next.js for student and teacher roles, with the RAG backend in Python
- Gave students instant, source-grounded answers without waiting for a teacher

Guangzhou Road Library — *github.com/DavisYJue/GuangzhouRoadsLibrary* Next.js, Leaflet, GeoJSON

- Developed a road data viewer where users search, filter, and select roads from Guangzhou's Road Library
- Built an interactive Leaflet map showing selected roads and district boundaries from GeoJSON data
- Kept selected roads highlighted across filter changes and page navigation

Hospital Database Management System — *github.com/DavisYJue/Hospital-Database* PHP, MySQL, XAMPP

- Built a simulated hospital system covering patient and staff records, rooms, and pharmacy inventory
- Independently designed the PHP and MySQL database and backend, centralizing manually tracked records

LANGUAGES

Indonesian: Native | **English:** Professional Working (IELTS 6.5 Overall) | **Mandarin Chinese:** Intermediate (HSK 4)

EDUCATION

Bachelor of Engineering, Computer Science and Technology

South China University of Technology (华南理工大学), Guangzhou, China

Sep 2022 – Jun 2026 | GPA: 3.43/4.00 (Average Score: 85.3/100)
