## SUMMARY

Recent Computer Science and Technology graduate with 9 months of hands-on experience in Shopify e-commerce and customer support, gained across two connected roles at Fantech and Teevolution. Comfortable editing Shopify Liquid templates, building custom page sections, and writing personalized CSS. Also experienced handling customer service under detailed SOPs. Seeking an entry-level Web Frontend Developer role.

## SKILLS

**Technical:** HTML, CSS (strong, hands-on/custom styling), JavaScript (working knowledge), React (basic), Shopify Liquid (working knowledge, theme customization), Git, AI-assisted development workflows

**E-commerce:** Shopify product listing management, theme/page section customization, order export & fulfillment

**Soft skills:** Customer communication (email support), SOP adherence, attention to detail, self-directed learning

## EXPERIENCE

### Web Commerce Intern (Shopify) — *Fantech World*

Jul 2025 – Feb 2026

- Added and edited product listings on the company's Shopify storefront
- Built and added new custom sections to product pages using Shopify Liquid
- Edited and extended the overall website theme by writing and modifying Liquid template code
- Personalized page styling with hand-written CSS to match specific design and layout requirements

### Customer Service & E-commerce Intern — *Teevolution (part of Fantech World)*

Jul 2025 – Feb 2026

- Managed order export and fulfillment for the online store
- Contributed to adding new sections and features on product detail pages, in coordination with the Teevolution team
- Handled customer service inquiries via email, following the company's own detailed SOP
- Maintained consistent, SOP-compliant responses across customer communications

## PROJECTS

### AI-Integrated Learning Management System (Thesis Project) — *Solo Project*

React, DeepSeek (local LLM), RAG

- Designed and built an intelligent LMS that transforms a traditional LMS into an AI-assisted platform for both students and teachers
- Implemented a Retrieval-Augmented Generation (RAG) pipeline using a locally-hosted DeepSeek model to answer questions grounded in teacher-uploaded materials and the LMS manual
- Built the frontend interface in React to support AI-assisted interactions for both student and teacher user roles

### Hospital Database Management System — *Solo Project*

PHP, XAMPP

- Built a simulated hospital management system covering patient and staff information, room management, and pharmacy inventory
- Designed and implemented the database structure and backend logic independently using PHP and XAMPP (MySQL)

## LANGUAGES

Indonesian: Native | English: Fluent | Mandarin Chinese: HSK 4

## EDUCATION

### Bachelor of Engineering, Computer Science and Technology

South China University of Technology, Guangzhou, China

Graduated 2026 | GPA: 3.43/4.00 (Average Score: 85.3/100)
